ABSTRACT

Flame-spray transportation surface marking method employing a binder material selected from the group consisting of acrilic polymers and expolymers, olefin polymers and copolymers having a number average molecular weight greater than about 10,000, urethane polymers and copolymers, curable epoxy resins, ester polymers and copolymers, curable epoxy resins, ester polymers and copolymers, curable epoxy resins, ester polymers and copolymers, curable topoxid particulate filler selected from the group consisting of reflective elements, skid-resistant particles, magnetizable particles, and mixtures thereof, wherein the binder adheres directly to the transportation surface.
